

PARTNER FOR FIRE SAFETY AND TRAINING

FIRE SAFETY PARTNERSHIP PROGRAM - AMBULATORY SURGERY

Fire Procedures and Staff Training are Required in Healthcare

You are required to have fire procedures... and you are required to train your staff in these procedures.

The Problems - Between 2006 and 2010 U.S. fire departments responded to an estimated average of 6,240 structure fires in or on healthcare properties each year.
– *National Fire Protection Association Fact*

Your staffing levels, patient acuity, facility layout – and its fire protection features – change over the years. Most likely, your fire procedures and staff training have not evolved along with these changes.

The Solution - We provide fire safety, emergency management and Life Safety Code® consulting services – we work with you to strengthen your procedures and ensure effective training. Our program includes:

- ✦ A fire protection survey – we focus on the fire protection features of a building, and on horizontal evacuation capabilities
- ✦ Completion of facility-specific and unit-specific fire and evacuation procedures
- ✦ A report of recommendations that outlines corrective actions for improvement
- ✦ Training for leadership, and for clinical, ancillary and support staff, under realistic fire and smoke conditions
- ✦ Fire drills to test the knowledge of the staff and the effectiveness of the fire training

RPA is a dedicated team of fire safety, emergency management, and code compliance experts with 41 years experience working exclusively in healthcare at more than 1,300 facilities in 43 states.
