## Technology for Life Safety, Fire Safety & Emergency Management

**Our industry leading technology creates real-time situational awareness within organizations, and rolls up reporting into a central dashboard.**

This minimizes data gaps and inconsistencies that may result from manual or paper-based processes. By moving from paper to a centralized technology solution, healthcare organizations will eliminate challenges associated with staff turnover, accessibility of information across the board (or organization), and maximizing staff utilization.

### TECHNOLOGY HUB TO TRACK, STORE AND MONITOR

With increasing numbers of fires and disasters, as well as health systems expanding through mergers and acquisitions, the need for real-time coordination, communication and response across the organization continues to rise. RPA Navigator is designed to aid healthcare facilities in streamlining their emergency management, life safety and fire safety procedures, improve preparedness, and collect and analyze data through a user-friendly online system.

- + Situational awareness in disasters (through emergency reporting)
- + Contacts (internal and community partners/AHJs)

- + Patient categories of care and surge capacity plan details
- + Evacuation sites and Alternate Care Sites (ACS)
- + Resources and assets
- + Transportation resources for evacuation
- + Vendors
- + Relevant documents for patient and staff safety (plans, policies, procedures, Job Action Sheets, tools, etc.)
- + Floor Plans, photos and videos (life safety, full building evacuation, etc.)
- + Life Safety Code® compliance and door inspections

“ Mistakes are prone to occur during high-adrenaline situations and RPA Navigator eliminates both hearsay information and the human interpretation of data. This technology is a tool designed by emergency management experts to help facilities make life and death decisions based upon criteria and information instantly obtained from staff in the field. By streamlining communication, response and reporting, RPA Navigator allows staff to focus their time on the situation at hand, which is critical for high reliability organizations such as hospitals.”

– Mark Casey, Director of Safety, Security & Emergency Preparedness, Saint Mary’s Hospital, Trinity Health New England

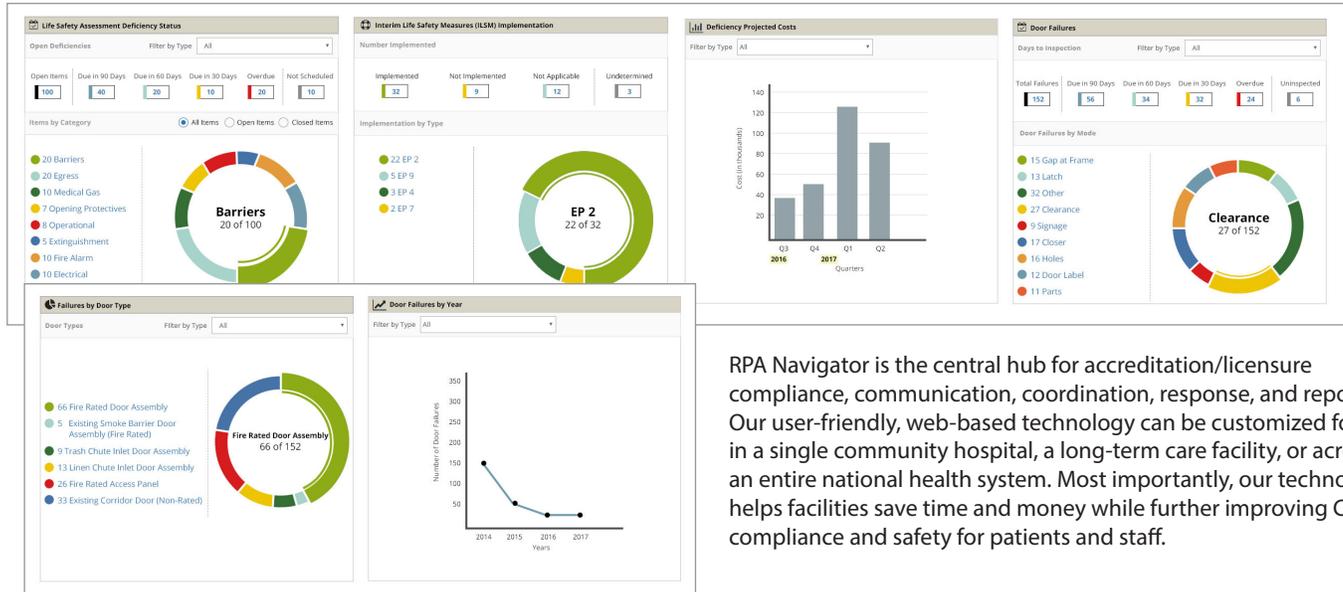

As consultants to thousands of healthcare facilities across the U.S., we understand how cumbersome and chaotic responding to an unexpected event can become. We leveraged our 40-years of experience working with hospitals, long-term care facilities and ambulatory locations to build a web-based technology that opens communication across facilities and teams, ensures easy access to policies and forms, and provides a mechanism for improving continuity of operations.”

– David Hood, Principal at RPA/Director of Operations - Healthcare

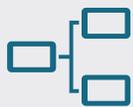

# RPA Navigator

Integrated planning, reporting and performance metrics for Emergency Management, Life Safety and Fire Safety

The Life Safety Module addresses compliance while bridging the gaps and cross-referencing requirements between CMS Regulations (K-Tags), Life Safety accreditation standards and the NFPA Life Safety Code®. This system has the ability to manage door inspection and life safety assessment processes while aggregating data across multiple sites and trending/tracking deficiency remediation costs, issues and strategies.

RPA Navigator is the central hub for accreditation/licensure compliance, communication, coordination, response, and reporting. Our user-friendly, web-based technology can be customized for use in a single community hospital, a long-term care facility, or across an entire national health system. Most importantly, our technology helps facilities save time and money while further improving CMS compliance and safety for patients and staff.

## Coordination

Across all levels of the organization: Satellite Locations > Facility > Region > Division > Corporate/State

## Control

All levels of the organization have permissioned access to information and data analysis capabilities

## Compliance Management

Trends and metrics for accreditation and licensure along with risk mitigation strategies via dashboards and summaries

## Cost Savings

For managing groupings of issues and solutions, lawsuits, lost productivity, manage and fix it now vs. getting cited and have 60 days to fix it, recovery costs/operations in small or large scale disasters

## Continuity of Normal Operations

Staff turnover mitigation, shared info across department silos in an organization, and a common operating platform

## Continuity of Emergency Operations

Everything above when things go awry

## Continued Development

Our platform is constantly updated to keep pace with the evolving needs of our clients, who are our partners in the development of new modules and components

## Customer Service

RPA enjoys a 95% client retention rate

More than 1,400 clients rely on RPA for their healthcare technology needs. Contact our Business Development Department at [info@phillipsllc.com](mailto:info@phillipsllc.com) or 860-793-8600 today to schedule a demo of RPA Navigator and learn how our integrated planning and reporting technology can help your facility to streamline emergency response and life safety compliance while maximizing cost savings.
